

API's,Difference between get and post?
For Login Which API to use,post or get?
What is json, why do we use json?? And why they develop it?
Is JavaScript synchronous or asynchronous? And how asynchronous is handled?
Difference between var and let in context of scoping
Scope (local vs global)
Get vs Post request difference and which one to use when.
Status code when we'll do API call? (All 200-500 with explanation)
& Restful services are being used in your fyp?
API walay ki approach
What would happen if i use PUT instead of POST.
API testing
Rest & Soap API
-Restful Api
6. Data Structure mein sTack and Queue
7. After that he asked about React questions
8. Session and Cookies aur in depth and a gave a scenario on it
9. Difference b/w synchronous and asynchronous
10. Session and Cookies in depth(5 min lagey iss pey
11. Promises (JavaScript)
Web applications vs desktop applications difference?
Make a interface(front end) of how you deal with any problem in your daily life
Table ka format in html
Views
What is Redux
Is JS a multithreading language?
closures in JS
Virtual DOM in JS
sync vs async in JS
why async there in js-> related to multithread concept Qu
Your role in fyp
let vs var in JS

hooks in react

Event Loop

Express Routers

1: dif b/w display none & not visible css

2: Remove options from select and append new using jquery

MVC

API

Difference between Put and Patch.

Difference between Put and Patch.

What is header in https request.

Difference between Get and Post,

Can we do GET, POST, PUT, DELETE using POST only?

Default port of http and https.

Http vs https

What is hoisting

What is nodejs

What is express js

What is middleware

What is eventloop

Async instructions in js

Async/await

Error handling in js

What is nodejs

advantages of react

why react is better then angular

synthetic events

uses of useEffect -----> multipel use cases

hexarical scooping

collesures

null vs undefined

window object vs document object

Redux -----> reflect changes

controlled vs uncontrolled components

highr order component

life cycle in react

how state manage in redux --- important

setState value in scope and outside of scope

lexical scope

types of scope

hoisting

primitive and non premitive

redux interview store action disapatcher reducer

map vs filter

for each vs map

map vs for loop and better time complexity

routing and protected routing

current and latest version of react express node mongodb

reat-router-dom latest version

why we do need functioal w.r.t class compnent

call back hell

props drealing

spread and rest operator

dom vs virtual dom

react use which dom

controlled vs controlled component

event loop working

micro task call stack

how api call function working

why react is better then angular

why library is better then framework

redux saga thunk

Javascript in detail

React Basics
What is hoisting
What difference between normal and es6 function
Is node js is framework or language if not justify your answer
JavaScript is sync or async justify it
Is its sync how can you achieve asynchronous in js
Explain the Node js event loop phases step by step
You have two array one is pattern array and other is subpattern you have to write a function which take both input and return the index if subpattern exist in the pattern.
What is difference between async/await and promises where you can use promise or async/await and why
Diff b/w POST and Get requests
HTML tags
Br, tb, td,
JavaScript are also asked lekin Maine JavaScript pe kaam nhi kya howa aur DP padhi nhi is lye further questioning nhi hoi
Diff b/w === and ==
1.How to clone a object in JS (deep copy)
2.What is closure
3.State and props and difference between them
4) Make a http request using AJAX.
Hosting in js
UseEffect, state props
What are states?
What does useState() and useEffect() hooks do?
What is Event loop?
Is Nodejs single threaded or multithreaded?
How node handles multiple requests?
Restful api
Cookies session
Or cookies client side pr locally kahan store hoti hn

- | |
|---|
| 1) Get put post delete |
| 2) Can we do all these with the same function? (Yes, patch) |

REACT

- | |
|--|
| 1) States |
| 2) Components |
| 3) Types of states |
| 4) How to submit a form in REACT (send data from form to database??) |

Authentication vs authorization

Put patch post m diff

- | |
|--|
| - Explain React |
| - JWT, basic structure of JWT |
| - Session Cookie local storage |
| - Authentication and Authorisation |
| - What is API |
| - HTTP Requests |
| - Component Types |
| - life cycle methods |
| • APIs, difference between GET and POST |
| • For login, which API to use, post or get |

Like post put get delete kya hote etc Get post request kese krte ye sb

Restful api

Authentication vs authorization

Put patch post m diff

Cookies session

Or cookies client side pr locally kahan store hoti hn

What is kernel and its functionality in Operating system

How RAM processes

Have you seen segmentation error?

api testing,

What is defer?

What are promises?

Can we create a synchronous function using promises?

How to find out the datatype of a variable?

If a variable is initialized as a string in global scope and then assigned a int value in a method and then a bool value in a method is this a valid operations in JS?

What are routers

Endpoints

- What is redux in react?

- diff b/w angular and react

Rest apis

GET vs POST

Cookies and session

session management in web

Injection attacks in web

Difference between POST and GET?

Why we don't use POST for all kinds of requests?

What is CSREF?

What is cross-origin?

What are the disadvantages of allowing cross-origin?

HTML5?CSS3?

Exception handling?

Promises?

Sync vs async?

Let vs var?

Why react?

- what are different architectures you are familiar with

- what is MVC architecture

- what are threads

- what is asynchronous programming

- why we use threads

- how many stackframes are created for a process

- why there is stackoverflow exception
- one stackframe is allocated to a function of program or the complete program
- what is an api
- types of api
- advantage of using api
- what is server caching
- what are caching policies

JS:

some basic concepts like
difference between let,var,const?

Hoisting?

Closure?

Asynchronous functions?

Callbacks?

If we have callbacks then why promises?

Async await?

NodeJS:

What is NodeJs?

Main advantages of node over any other framework?

For what kind of tasks node is best and for what kind of tasks we should not use node?

As you said node is single threaded then how it is non-blocking?

React:

React:

What are hooks?

Hooks you used in fyp?

why React?

What is JSX?

Main Features of React?

useState hook?

UseEffect hook?

What are sideEffects?

What are props?

If we have props then why context api ?

What is redux?

Express:

Features of Express?

Request life cycle?

Middlewares?
